

# Marketplace Health Overview

Executive view of marketplace scale, delivery reliability, review quality, payment behavior, and data trust.

**Key Insight**

Marketplace scale is strong with 99K orders and 13.59M product revenue. Delivery reliability is high at 91.89% on-time, but late deliveries show lower average review scores than on-time deliveries.

# Delivery Reliability

Monitoring on-time performance, delivery speed, and delay patterns across delivered orders.

## Data Quality Issue Summary

| Issue                                           | Cases | Notes                                                                                                             |
|-------------------------------------------------|-------|-------------------------------------------------------------------------------------------------------------------|
| Cancelled orders                                | 625   | Cancelled orders are separated from delivery reliability metrics.                                                 |
| Carrier before approval rows                    | 1359  | Carrier handoff should normally occur after order approval.                                                       |
| Customer delivery before carrier rows           | 23    | Customer delivery should not occur before carrier handoff.                                                        |
| Delivered before purchase rows                  | 0     | Delivery timestamp should not be earlier than purchase timestamp.                                                 |
| Delivered orders missing customer delivery date | 8     | Delivered-order reliability analysis requires a customer delivery timestamp.                                      |
| Duplicate order_id rows in raw_orders           | 0     | raw_orders is expected to have one row per order_id.                                                              |
| Negative freight rows                           | 0     | Negative freight values are invalid and should be investigated.                                                   |
| Negative payment value rows                     | 0     | Negative payment values are invalid and should be investigated.                                                   |
| Orders missing approved date                    | 160   | Approval timestamp is useful for checking fulfillment sequence quality.                                           |
| Orders missing estimated delivery date          | 0     | Late and on-time classification requires an estimated delivery timestamp.                                         |
| Orders without payment                          | 1     | Payment coverage affects payment value analysis.                                                                  |
| Orders without review                           | 768   | Missing reviews reduce review-score coverage.                                                                     |
| Product categories missing translation          | 2     | Untranslated categories fall back to the original category name.                                                  |
| Products without category                       | 610   | Missing categories limit product category analysis.                                                               |
| Review scores outside 1 to 5                    | 0     | Review score analysis expects the standard 1 to 5 scale.                                                          |
| Unavailable orders                              | 609   | Unavailable orders are separated from delivery reliability metrics.                                               |
| Zero freight rows                               | 383   | Zero freight may represent free shipping or no freight charged; requires review and is not automatically invalid. |
| Zero or negative price rows                     | 0     | Product revenue analysis expects positive item price values.                                                      |
| Zero payment value rows                         | 9     | Zero payment requires review and is not automatically invalid unless later validation confirms an issue.          |

## Key Insight

The dataset is mostly usable for marketplace analysis, but review coverage, product category completeness, and zero freight/payment cases should be treated as known limitations before business interpretation.
